

Cost is black & white

Price alone isn't. Your PBM must also control utilization or you'll be seeing **red**.

**Many PBMs look alike.
Before you choose one, do the math.**

Price x Utilization = Total Cost

Many PBMs try to show their worth based on per prescription cost alone.

PBM 1

\$1 per script

PBM 2

\$1.25 per script

Cheaper seems better, right?

There's more to the equation than price alone.

Emphasis on Price

\$1 per script X 100 scripts
= \$100 total cost

Emphasis on Utilization

\$1.25 per script X 70 scripts
= \$87.50 total cost

When choosing a PBM, be sure to look for the utilization controls and integration benefits that, together, deliver superior results.
